Hesco is now your  
One Stop ON-LINE Shop  
with HOOPS 2005!

On-Line Ordering  
As Easy As 1.. 2.. 3!

## Welcome to HOOPS 2005!

### Hesco's On-Line Order Processing System

Our on-line ordering system allows Hesco customers to place their orders directly into our system, bypassing the Order Department. This feature allows you to place your order at any time during the day or night. You can also check pricing and availability for products, search for products, check your account balance and even pay invoices with a credit card.

HTML, the language of the Internet, is more than adequate for browsing, but falls short in addressing most robust business applications. The HTML document is a read-only object with a simple forms facility to accept data with very restricted ways of entering and editing data. For high volume business applications, users expect a higher-quality interface. Conflicts in the implemen-tations of Java by different browser manufacturers prevents Java from being a consistent and reliable approach to quality robust applications on the net.

HOOPS 2005 uses your browser to initiate the installation of a HESCO HOOPS applicationviewer similar to the installation of an Acrobat viewer. This viewer resides in your PROGRAM FILES file. Once you download and install, you do not have to access the Hesco Web Page to place orders or look up items. Just access the internet like you always do, and open the HESCO HOOPS program to connect. Any upgrades we make in the application are automatically done to the program... you never need to download the viewer again.
